

Makena Kong

Full Stack Engineer, San Francisco

Experience

Full Stack Engineer

Wefunder | Apr '21 - Present

- Working on the *Community Team* to improve user experiences by refreshing UI, optimizing site performance and building new user facing features.
- Migrating & decoupling 10 years worth of angular, coffee js and monolithic ruby/rails code into a react front end and rails endpoints.

Full Stack Engineering Intern

Wefunder | Jan '21 - Apr '21

- Designing new features for company profiles to improve clarity, feedback, and ease of investing for the user/investor.
- Developing reusable React components with optimal performance to improve page speed and SEO, and customization for developer use.

Information Technology Intern

The Clorox Company | June '19 - August '19

- Co-led full stack development of the *Clorox Innovation Hub* website and a project tracking system for employee innovations. Improved legacy architecture by replacing with React, Restful API with Express, CloudSQL database and Google App Engine hosting.
- Designed and implemented a Data catalog with integration of Oracle IDR and BigQuery to decrease data search times and IT ticket requests.

Core Engineer Intern

Space Systems Loral | June '18 - September '18

- Developed an analytical dashboard that improved the access and experience for managers and QA engineers during QA reviews. Replaced Microsoft Access and Excel system with Highcharts and Django - drastically decreasing load times and automating real time updates.

Education

California Polytech State Institute, San Luis Obispo

June 2020

Bachelor of Science in Computer Science

Minor in Studio Art
